In this post we will fix the **Cloud resource location is not set for this project** error message.

I ran into this issue when I tried to deploy scheduled cloud function to the Firebase platform:

```
i deploying functions
i functions: ensuring required API cloudfunctions.googleapis.com is enabled...
i functions: ensuring required API cloudbuild.googleapis.com is enabled...
✓ functions: required API cloudbuild.googleapis.com is enabled
✓ functions: required API cloudfunctions.googleapis.com is enabled
i functions: preparing functions directory for uploading...
i functions: packaged functions (27.42 KB) for uploading
✓ functions: functions folder uploaded successfully
i functions: creating Node.js 10 function scheduledFunction(us-central1)...
i scheduler: ensuring required API cloudscheduler.googleapis.com is enabled...
i pubsub: ensuring required API pubsub.googleapis.com is enabled...
✓ scheduler: required API cloudscheduler.googleapis.com is enabled
✓ pubsub: required API pubsub.googleapis.com is enabled

Error: Cloud resource location is not set for this project but scheduled functions requires it. Please see this documentation for more details: https://firebase.google.com/docs/projects/locations.
```

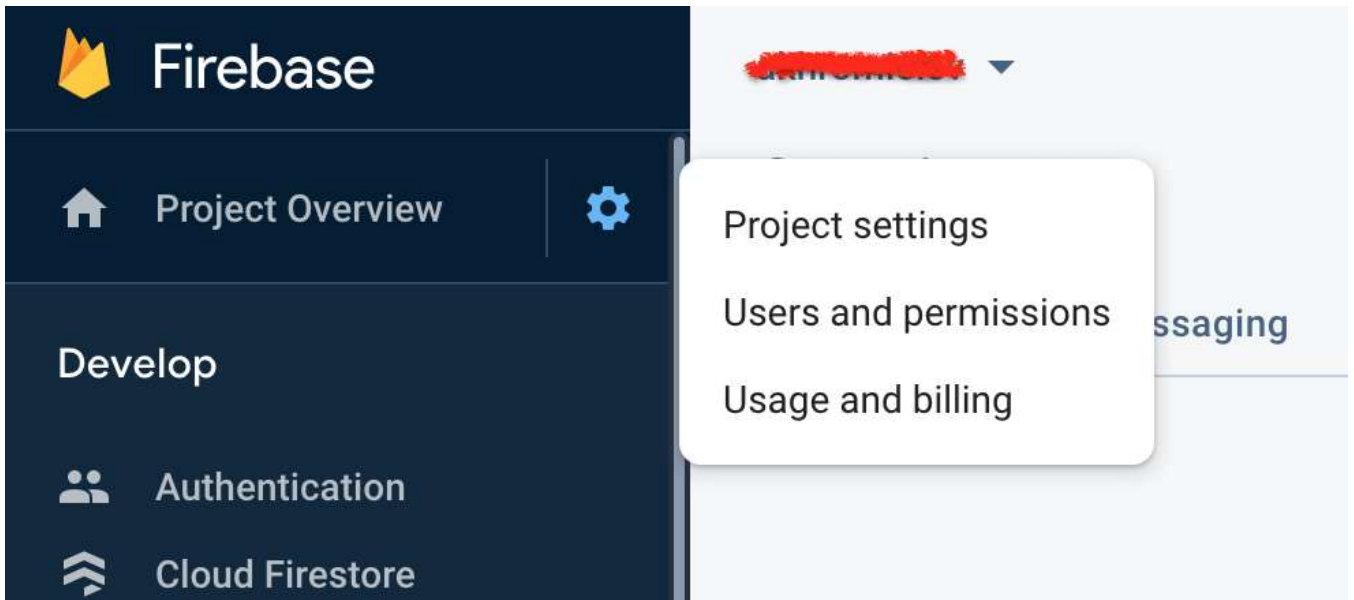

The full description of this error looked like this:

```
Error: Cloud resource location is not set for this project but scheduled functions requires it.
```

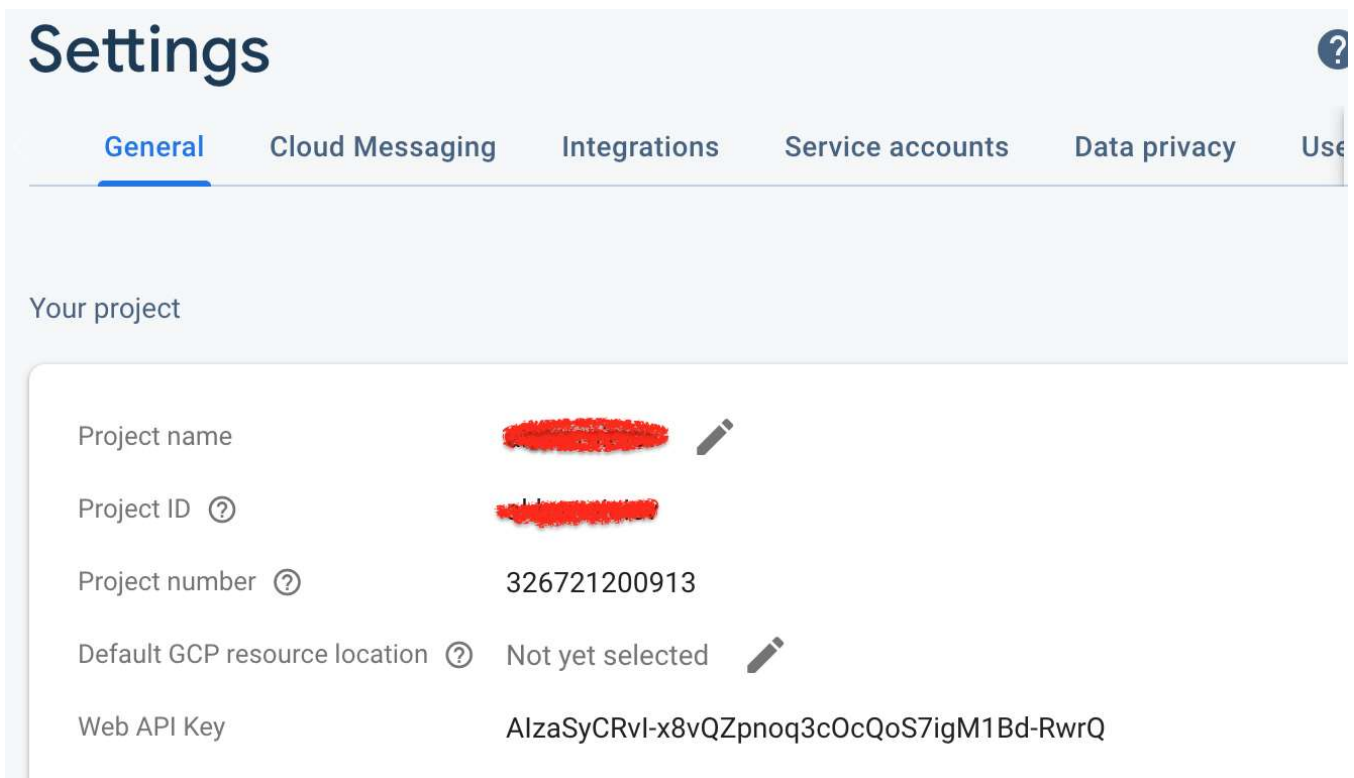

I started to google the solution to this problem, but the solution to the issue was pretty simple.

Solution

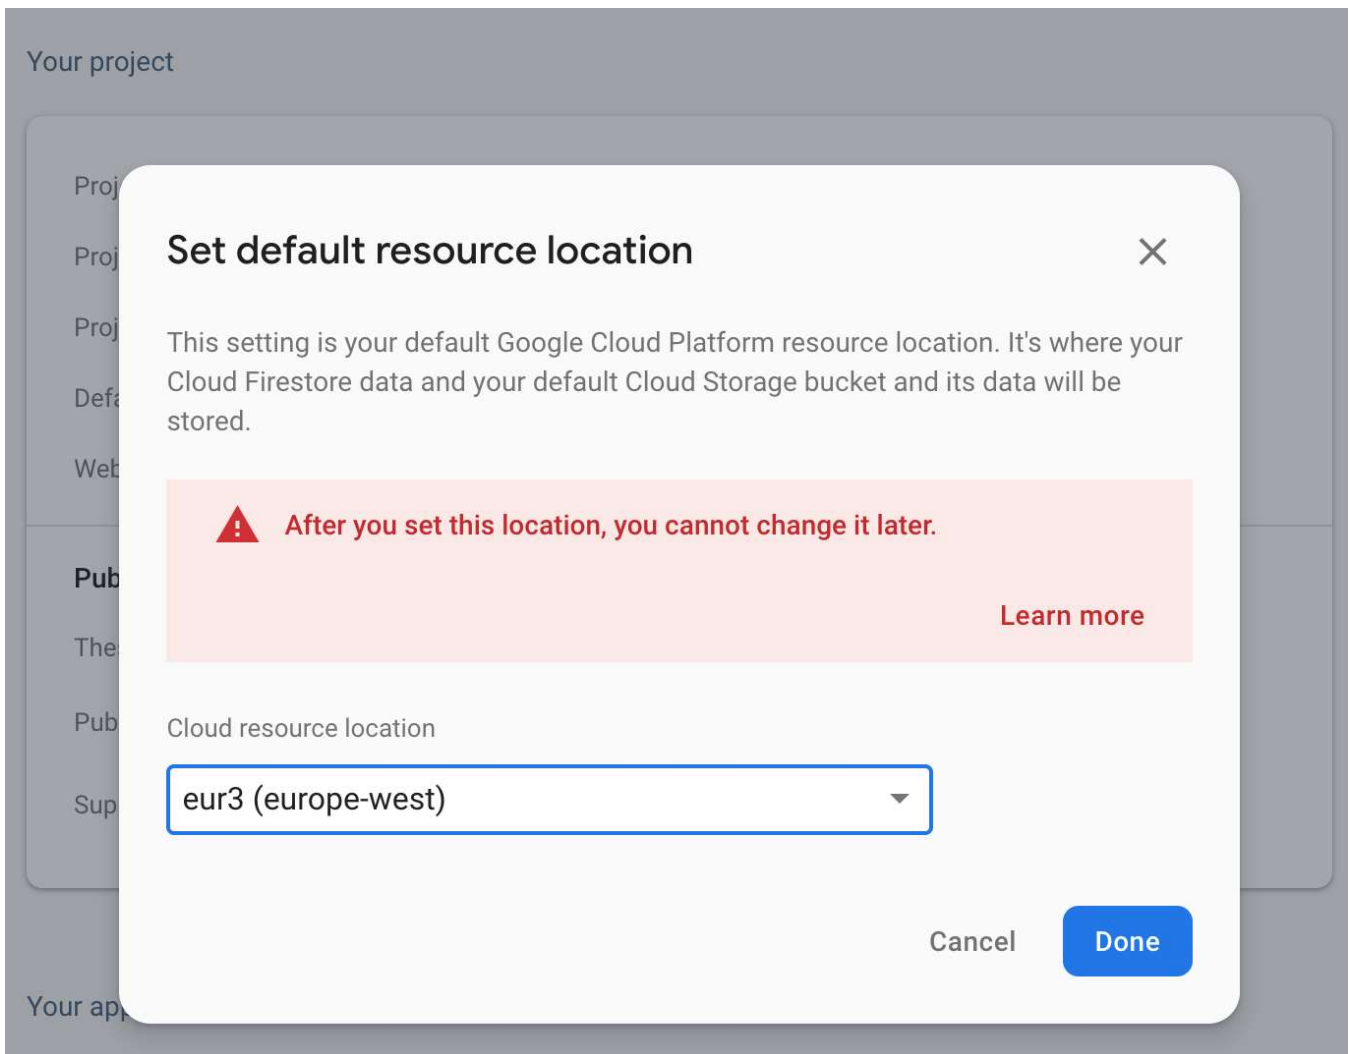

You need to go to your Firebase project's settings:

Then edit the **Default GCP resource location** in **General tab**:

Set the default resource location (I will choose the closest region to me) and click "Done":

After this go to your app and repeat the deploy:

```
=== Deploying to 'akhromieiev'...  
  
i deploying functions  
i functions: ensuring required API cloudfunctions.googleapis.com is enabled...  
i functions: ensuring required API cloudbuild.googleapis.com is enabled...  
✓ functions: required API cloudbuild.googleapis.com is enabled  
✓ functions: required API cloudfunctions.googleapis.com is enabled  
i functions: preparing functions directory for uploading...  
i functions: packaged functions (27.44 KB) for uploading  
✓ functions: functions folder uploaded successfully  
i functions: creating Node.js 10 function scheduledFunction(us-central1)...  
i scheduler: ensuring required API cloudscheduler.googleapis.com is enabled...  
i pubsub: ensuring required API pubsub.googleapis.com is enabled...  
✓ scheduler: required API cloudscheduler.googleapis.com is enabled  
✓ pubsub: required API pubsub.googleapis.com is enabled  
✓ functions: created scheduler job firebase-schedule-scheduledFunction-us-central1  
✓ functions[scheduledFunction(us-central1)]: Successful create operation.  
  
✓ Deploy complete!
```

The problem will be solved.
